Table of Contents

1. Overview
2. Prerequisites
3. URLs to Whitelist
4. Key Fields / Reference
5. Validation and Testing
6. Troubleshooting
7. Summary

1. Overview

This guide lists all URLs that must be whitelisted (allowed) in your network environment for Quilr AI to function correctly on the USA Production Tenant. Share this document with your network/security team so they can add these URLs to the firewall, proxy, or web gateway allow-list before deployment begins.

Purpose

- Ensure all Quilr AI service endpoints are reachable from user endpoints
- Prevent connectivity failures caused by blocked domains
- Provide a single reference for network teams to validate URL accessibility

2. Prerequisites

Requirement	Details
Network Access	Firewall, proxy, or web gateway admin access to add allow-list rules
HTTPS (Port 443)	All URLs below require outbound HTTPS on port 443
DNS Resolution	Endpoints must be able to resolve the listed domains

3. URLs to Whitelist

The following URLs must be whitelisted in your firewall, proxy, or web gateway to ensure Quilr AI services function correctly on the USA Production Tenant.

3.1 Core URLs

URL	Purpose
https://app.quilrai.com	Quilr AI Console (Admin & Policy Management)
https://app.quilrai.com/ext-beoauth	Browser Extension Authentication
https://quilr-extensions.quilrai.com	Extension Updates & Downloads
https://dlpone.quilrai.com	DLP Engine Endpoint

3.2 Granular URLs (If Full-Domain Whitelisting Not Permitted)

If your organization restricts full-domain whitelisting, enable the following specific paths:

Common

- <https://quilr-extensions.quilrai.com/<tenant-uuid>/manifest.xml>
- <https://quilr-extensions.quilrai.com/<tenant-uuid>/vanguard.crx>

Windows

- <https://quilr-extensions.quilrai.com/browser-agent/prod/windows/quilr-installer.zip>
- <https://quilr-extensions.quilrai.com/browser-agent/prod/windows/64/update.json>
- <https://quilr-extensions.quilrai.com/browser-agent/prod/windows/64/quilr-native-messaging-agent-windows.zip>
- https://aka.ms/vc14/vc_redist.x64.exe

macOS

- <https://quilr-extensions.quilrai.com/browser-agent/prod/mac/silicon/update.json>
- <https://quilr-extensions.quilrai.com/browser-agent/prod/mac/intel/update.json>
- <https://quilr-extensions.quilrai.com/browser-agent/prod/mac/silicon/quilr-native-messaging-agent-mac-dir.zip>
- <https://quilr-extensions.quilrai.com/browser-agent/prod/mac/intel/quilr-native-messaging-agent-mac-dir.zip>

Replace <tenant-uuid> with your actual tenant UUID. If you do not have your tenant ID, check with Quilr AI Support to obtain it.

4. Key Fields / Reference

Field	Value
Tenant Type	USA Production
Console URL	https://app.quilrai.com
Extension Auth URL	https://app.quilrai.com/ext-beoauth
Extension Update URL	https://quilr-extensions.quilrai.com
DLP URL	https://dlpone.quilrai.com
VC++ Redistributable	https://aka.ms/vc14/vc_redist.x64.exe

5. Validation and Testing

Open each URL in a browser to verify it is not blocked. Any HTTP response confirms accessibility.

Step	URL	Expected Result
1	https://app.quilrai.com	Page loads (any HTTP response)
2	https://app.quilrai.com/ext-beoauth	Domain resolves and responds
3	https://quilr-extensions.quilrai.com	Domain resolves and responds
4	https://dlpone.quilrai.com	Domain resolves and responds
5	https://aka.ms/vc14/vc_redist.x64.exe	Download starts or page loads

Any HTTP response (200, 301, 403, 404, etc.) confirms the URL is not blocked. A connection timeout or DNS failure indicates the URL is blocked and needs to be whitelisted.

6. Troubleshooting

Issue	Resolution
URL returns connection timeout	URL is likely blocked - add to firewall/proxy allow-list
DNS resolution failure	Domain not resolvable - check DNS settings or proxy config
SSL/TLS certificate error	Proxy may be stripping certificates - add exception
URL blocked by web gateway	Add the domain to web gateway allow-list category
Path blocked but domain allowed	Switch to full-domain whitelisting or add individual path

7. Summary

#	URL	Purpose
1	https://app.quilrai.com	Console
2	https://app.quilrai.com/ext-beoauth	Extension Auth
3	https://quilr-extensions.quilrai.com	Extension Updates
4	https://dlpone.quilrai.com	DLP Engine
5	https://aka.ms/vc14/vc_redist.x64.exe	VC++ Redistributable
